

AUS and UNK  
 2016 IMO Final Team Training  
 Exam F5

- Each question is worth 7 points
- Time allowed is  $4\frac{1}{2}$  hours
- No books, notes or calculators permitted
- Any questions must be submitted in writing within the first half hour of the exam.

1. Let  $ABC$  be an acute triangle with orthocentre  $H$ . Let  $G$  be the point such that the quadrilateral  $ABGH$  is a parallelogram ( $AB \parallel GH$  and  $BG \parallel AH$ ). Let  $I$  be the point on the line  $GH$  such that  $AC$  bisects  $HI$ . Suppose that the line  $AC$  intersects the circumcircle of the triangle  $GCI$  at  $C$  and  $J$ . Prove that  $IJ = AH$

2. Suppose that a sequence  $a_1, a_2, \dots$  of positive real numbers satisfies

$$a_{k+1} \geq \frac{ka_k}{a_k^2 + k - 1} \quad \text{for every positive integer } k$$

Prove that

$$a_1 + a_2 + \dots + a_n \geq n \quad \text{for every } n \geq 2.$$

3. Let  $S$  be a nonempty set of positive integers. We say that a positive integer is 'clean' if it has a unique representation as a sum of an odd number of distinct elements of  $S$ .

Prove that there exist infinitely many positive integers that are not clean.
